	<p>OCA14. Charakteristika autorského vkladu / Characteristics of the author's contribution</p>	

OCA15. Anotácia výstupu s kontextovými informáciami týkajúcimi sa opisu tvorivého procesu a obsahu tvorivej činnosti a pod. /
Annotation of the output with contextual information concerning the description of creative process and the content of the research/artistic/other activity, etc.⁸
Rozsah do 200 slov v slovenskom jazyku / Range up to 200 words in Slovak
Rozsah do 200 slov v anglickom jazyku / Range up to 200 words in English

<p>OCA16. Anotácia výstupu v anglickom jazyku / Annotation of the output in English⁹ <i>Rozsah do 200 slov / Range up to 200 words</i></p>	<p>The authors report the development and robust evaluation of the psychometric properties of the Sense of Community Descriptors Scale, which, as one of the few scales that measures the psychological sense of community regardless of context, can be utilized in all kinds of communities for assessing community intervention effectiveness. The Sense of Community Descriptors Scale uses a semi-projective method in the form of a semantic differential. Contrary to the majority of sense of community measures stemming from the theory of McMillan and Chavis, the Sense of Community Descriptors Scale is based on Peck's theory. It measures the sense of community in a real and ideal community. The degree of differences between them is then used to determine the level of satisfaction. The reliability of the scale was high, and its convergent validity was supported by the correlation of the Perceived Sense of Community Scale and the Brief Sense of Community Scale. Factor analysis showed three dimensions (Acceptance, Dynamics, and Openness). The Sense of Community Descriptors Scale is a reliable and valid instrument for measuring the level of psychological sense of community beyond the specific context of such community and in various multilayer communities.</p>
